

Remarks

The specification has been amended by providing a new abstract that is limited to 150 word as the current practice.

Claims 6, 10 12 and 21 shown to contain allowable subject matter have been respectively rewritten in independent form as new claims 23, 24, 25 and 26.

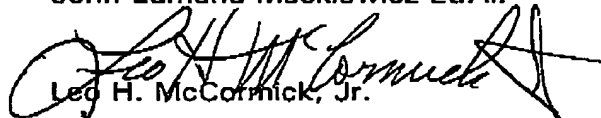

The indefiniteness of original claim 1 has been overcome in independent claim 23 by clearly indicating that the resilient assembly engages the second cam surface and obliquely moves the cam member from a position of rest to an operational position in a first direction toward the brake piston during a parking brake mode of operation and being temporally compressed in an opposite second direction to allow said cam member to return to said brake released positioning. Claim 23 further included the subject matter of claims 5 and 6 and as now rewritten defines the invention in a clearer manner.

This application now contains 4 independent claims. The fee of \$84 for the additional independent claim should be charged to Deposit Account 02-3222.

This amendment places this application in condition for allowance.

Respectively Submitted
